## Condition

87 07 17 Nov. 14, 2007 2016734

Air Conditioning Not Cold

Air conditioning is not cold after replacing or unplugging the A/C control unit or ambient temperature sensor.

## Technical Background

If the ambient temperature sensor or a/c control unit -E87- is unplugged or replaced for any reason, the ambient temperature sensor -G17- must be reset in order to function properly.

## Production Solution

No production change required.

## Service

To reset/calibrate the A/C control unit perform one of the following methods:

- Drive vehicle at 25 mph (41 kph).
- With vehicle in PARK, let engine run for 20 minutes.

## Warranty

Information only.
